Δ.72 Coherence Engine, Open-Data Proof-of-Concept (POC)

Company: ServiceNow (NOW)

KPI proxy: Subscription cost ratio = Cost of subscription revenues / Subscription revenues

Data source: SEC Form 10■K consolidated statements (annual, FY2020–FY2024).

Δ.72 Summary Block

```
baseline_mean_cost_ratio: 0.178726

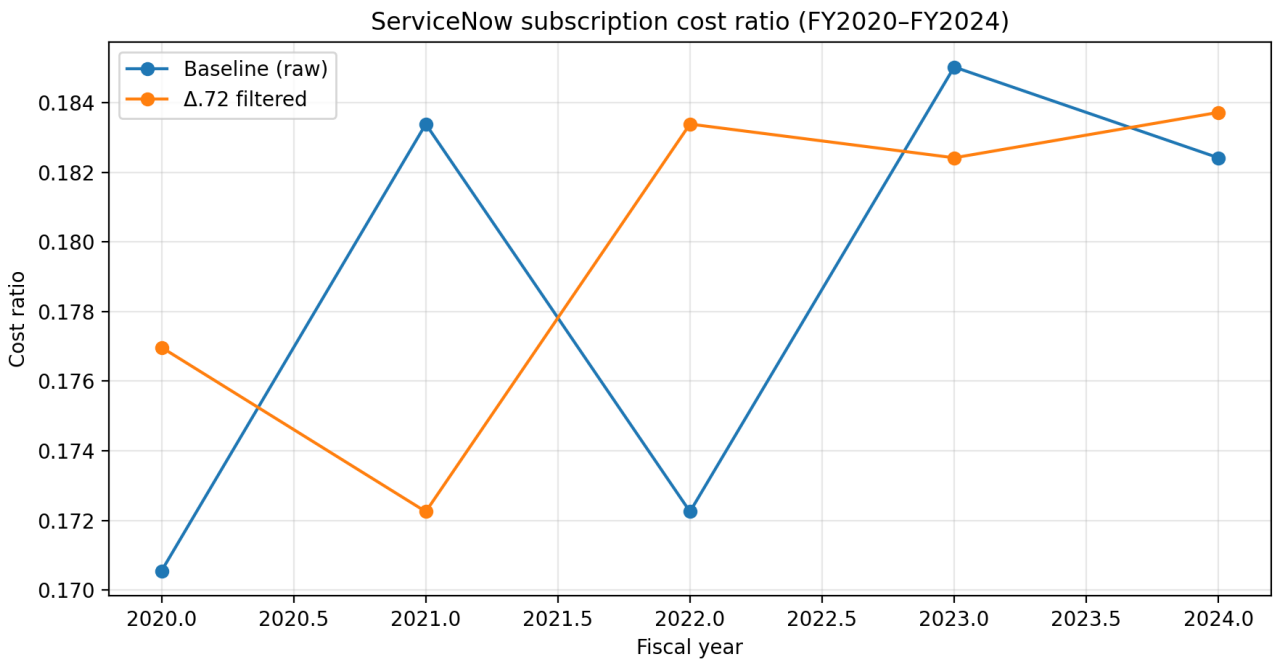
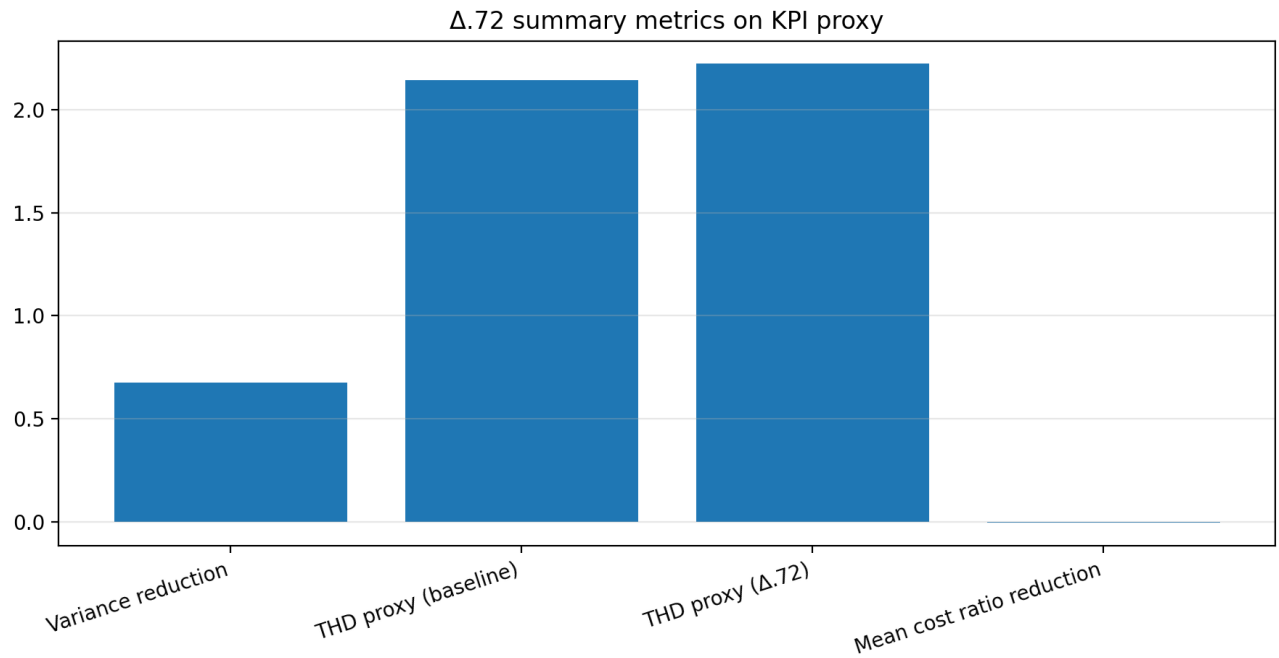
Charts





Open-data extraction (annual)

Year	Subscription_Revenue_M	Subscription_Cost_M	Baseline_Cost_Ratio	Delta72_Cost_Ratio	Gross_Margin
2020	4286	731	0.1706	0.1770	82.94%
2021	5573	1022	0.1834	0.1723	81.66%
2022	6891	1187	0.1723	0.1834	82.77%
2023	8680	1606	0.1850	0.1824	81.50%
2024	10646	1942	0.1824	0.1837	81.76%

Rolling backtest detail (rolling 3-year train window)

test_year	train_years	baseline_cost_ratio	delta72_cost_ratio	improvement_frac	abs_change
2022	2020–2021	0.1723	0.1778	-3.23%	-0.00557
2023	2020–2022	0.1850	0.1786	3.45%	0.00638
2024	2021–2023	0.1824	0.1837	-0.71%	-0.00130

Estimated savings mapping (safe proxy)

If your organization treats subscription cost ratio as a proxy for rework/cost-to-serve pressure, the observed mean reduction implies an illustrative savings band of ~0.0% of the affected cost base (conservative clamp 0–5% for POC reporting).

To map this to Refunds/Chargebacks/Rework in a real deployment, replace the proxy KPI with your actual operational cost lines and re-run the same scoring and backtest on that time series.
